HW1

(1) Compute the time complexity using frequency count for the following snippets.

a) `for(i=1; i<10; i=i+2)` — 1+6+5

```
{
    i=i*10;          5
    Printf("%d", i); 5
}
```

22

b) `i=1;` ⟶ 1 unit of time

```
while (i<=50);
{
    Printf("hello");
}
```

c) `for(i=1; i<=20; i++);` — 1+19+1 ⟶ 21

d) `for(i=1; i<=n; i=i++){` — 1 + n/2 + 1 + n/2

```
Printf("hello");   n/2
Printf("world");   n/2
Printf("i=%d", i); n/2   => 5n/2 + 2
}
```
